Key feedback

W A V E R L E Y
C O U N C I L

From those very supportive (20 respondents):

- Happy playground is moving to the back and further away from the street/road
- Suggestions for extra seating and/or table to be added
- Supportive of nature play for creativity, and that it contains logs instead of stones
- Suggestion to include more amenity for dogs, eg. Tap, tie-up area
- Height of play equipment shouldn't be high enough for neighbours to see
- "Rubber softfall will make playground useable for my crawlers. Looks far more inviting"
- Many suggested including a shade cloth over the play area

From those somewhat supportive (15):

- Many respondents very happy with rubber softfall as opposed to bark
- Many suggested fencing around the playground and shade cloth over the play area and picnic seating
- "...like that the concept retains the big trees and introduces a path to make the whole reserve more accessible"
- Supportive of planting that ensures privacy of residents
- Request for tower and slide to be in shade of the big tree or that a shade sail is provided"
- A request for consideration of planting to discourage balls being kicked on fence
- One raised support for new entrance gate, but that design is mindful of cars reversing and maintaining sightlines for reversing cars to see people leaving the park.

From those very unsupportive (3), somewhat unsupportive (2) and neutral (3):

- One raised concerns on the proposed new concrete path, that it dangerous for kids as it biscuits the park leaving little space to run or play games
- "...don't like that ball games will be close to cars and the street. It means that cars could become damaged and that kids would be more likely to run into the street to retrieve balls."
- "Not enough detail provided It's imperative to fence in the park. It's currently not safe for kids. Anything you can do to make the fences higher to the neighbouring houses would be good too. We throw frisbees and balls over the fences regularly."
